LIST OF TABLES

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see http://www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of the ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword – Supplementary information

ISO/IEC 29341-12-1 was prepared by UPnP Implementers Corporation and adopted, under the PAS procedure, by joint technical committee ISO/IEC JTC 1. Information technology, in parallel with its approval by national bodies of ISO and IEC.

This second edition replaces the first edition (ISO/IEC 29341-12-1:2008), which has been technically revised.

The list of all currently available parts of ISO/IEC 29341 series, under the general title *Information technology — UPnP Device Architecture*, can be found on the ISO web site.

Introduction

ISO and IEC draw attention to the fact that it is claimed that compliance with this document may involve the use of patents as indicated below.

ISO and IEC take no position concerning the evidence, validity and scope of these patent rights. The holders of these patent rights have assured ISO and IEC that they are willing to negotiate licenses under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of the holders of these patent rights are registered with ISO and IEC.

Intel Corporation has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Intel Corporation
Standards Licensing Department
5200 NE Elam Young Parkway
MS: JFS-98
USA – Hillsboro, Oregon 97124

Microsoft Corporation has informed ISO and IEC that it has patent applications or granted patents as listed below:

6101499 / US; 6687755 / US; 6910068 / US; 7130895 / US; 6725281 / US; 7089307 / US; 7069312 / US; 10/783 524 /US

Information may be obtained from:

Microsoft Corporation
One Microsoft Way
USA – Redmond WA 98052

Philips International B.V. has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Philips International B.V. – IP&S
High Tech campus, building 44 3A21
NL – 5656 Eindhoven

NXP B.V. (NL) has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

NXP B.V. (NL)
High Tech campus 60
NL – 5656 AG Eindhoven

Matsushita Electric Industrial Co. Ltd. has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Matsushita Electric Industrial Co. Ltd.
1-3-7 Shiromi, Chuoh-ku
JP – Osaka 540-6139

Hewlett Packard Company has informed ISO and IEC that it has patent applications or granted patents as listed below:

5 956 487 / US; 6 170 007 / US; 6 139 177 / US; 6 529 936 / US; 6 470 339 / US; 6 571 388 / US; 6 205 466 / US

Information may be obtained from:

Hewlett Packard Company
1501 Page Mill Road
USA – Palo Alto, CA 94304

Samsung Electronics Co. Ltd. has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Digital Media Business, Samsung Electronics Co. Ltd.
416 Maetan-3 Dong, Yeongtang-Gu,
KR – Suwon City 443-742

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Original UPnP Documents

Reference may be made in this document to original UPnP documents. These references are retained in order to maintain consistency between the specifications as published by ISO/IEC and by UPnP Implementers Corporation. The following table indicates the original UPnP document titles and the corresponding part of ISO/IEC 29341:

UPnP Document Title	ISO/IEC 29341 Part
UPnP Device Architecture 1.0	ISO/IEC 29341-1
UPnP Basic:1 Device	ISO/IEC 29341-2
UPnP AV Architecture:1	ISO/IEC 29341-3-1
UPnP MediaRenderer:1 Device	ISO/IEC 29341-3-2
UPnP MediaServer:1 Device	ISO/IEC 29341-3-3
UPnP AVTransport:1 Service	ISO/IEC 29341-3-10
UPnP ConnectionManager:1 Service	ISO/IEC 29341-3-11
UPnP ContentDirectory:1 Service	ISO/IEC 29341-3-12
UPnP RenderingControl:1 Service	ISO/IEC 29341-3-13
UPnP MediaRenderer:2 Device	ISO/IEC 29341-4-2
UPnP MediaServer:2 Device	ISO/IEC 29341-4-3
UPnP AV Datastructure Template:1	ISO/IEC 29341-4-4
UPnP AVTransport:2 Service	ISO/IEC 29341-4-10
UPnP ConnectionManager:2 Service	ISO/IEC 29341-4-11
UPnP ContentDirectory:2 Service	ISO/IEC 29341-4-12
UPnP RenderingControl:2 Service	ISO/IEC 29341-4-13
UPnP ScheduledRecording:1	ISO/IEC 29341-4-14
UPnP DigitalSecurityCamera:1 Device	ISO/IEC 29341-5-1
UPnP DigitalSecurityCameraMotionImage:1 Service	ISO/IEC 29341-5-10
UPnP DigitalSecurityCameraSettings:1 Service	ISO/IEC 29341-5-11

INFORMATION TECHNOLOGY – UPNP DEVICE ARCHITECTURE –

Part 12-1: Remote User Interface Device Control Protocol – Remote User Interface Client Device

1. Scope

This device template is compliant with the UPnP Device Architecture, Version 1.0.

This document defines the device
urn:schemas-upnp-org:device:*RemoteUIClientDevice:1*.

This device can be a UPnP root device, or embedded within a different device.

The *RemoteUIClientDevice* encapsulates all services for the Remote UI Client Device Control Protocol (DCP).

2. Device Definitions

2.1. Device Type

The following device type identifies a device that is compliant with this template:

urn:schemas-upnp-org:device:*RemoteUIClientDevice:1*

2.2. Device Model

It is recommended that *RemoteUIClientDevice* be implemented with support for securing UPnP actions. It is also recommended that securing of UPnP action is done using the *DeviceSecurity* service as defined by the UPnP security working committee. If implemented, the *DeviceSecurity* service must be contained either inside *RemoteUIClientDevice* implementation or in a device that encompasses the *RemoteUIClientDevice*. These two models are described below.

2.2.1. Description of Device Requirements

The following table briefly describes the services used in *RemoteUIClientDevice*.

Table 1: *RemoteUIClientDevice* Service Descriptions

Service Name	Service Description
RemoteUIClient	Allows for basic operations on a Remote UI client including: user interface connection management, optionally user interface availability management and optionally basic user interaction.
DeviceSecurity	Actions for taking ownership, configuring access control, establishing secure sessions, and invoking secure actions.

2.2.1.1. DeviceSecurity within RemoteUIClientDevice

This model is typically applicable to physical devices that need *DeviceSecurity* functionality (including device ownership and access control) to be used only by the *RemoteUIClientDevice*. In this case, products that expose devices of the type **urn:schemas-upnp-org:device:***RemoteUIClientDevice:1* must implement minimum version numbers of the required service specified in the table below.

Table 2: Device Requirements for stand-alone *RemoteUIClientDevice*

DeviceType	Root	Req. or Opt.[1]	ServiceType	Req. or Opt.[1]	Service ID[2]
RemoteUIClientDevice:1	*Yes*	*R*	*RemoteUIClient:1*	*R*	*RemoteUIClient*
			DeviceSecuirty:1	*O*	*DeviceSecurity*
			Non-standard services embedded by an UPnP vendor go here.	*X*	*To be defined by vendor*

[1] R = Required, O = Optional, X = Non-standard.
[2] Prefixed by urn:**upnp-org**:**serviceId**: .

Relationship between Services

Figure 1 shows the logical structure of the device and services defined by the working group for UPnP technology enabled Remote UI clients.

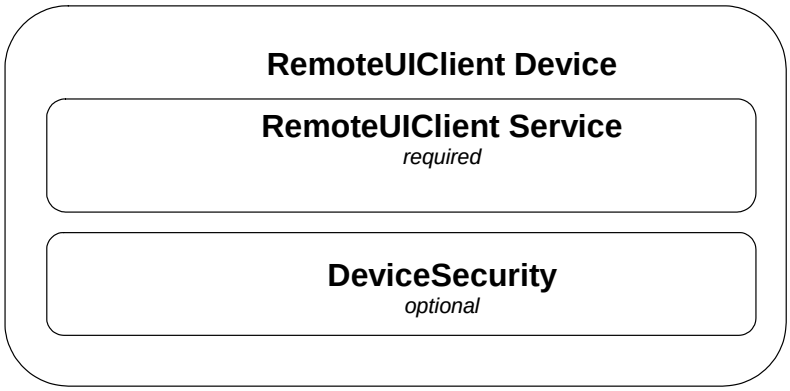

Figure 1: *DeviceSecurity* within *RemoteUIClientDevice*

2.2.1.2. DeviceSecurity outside RemoteUIClientDevice

This model is typically applicable to physical devices that implement Remote UI Client functionality, but the *RemoteUIClientDevice* may use *DeviceSecurity* that is already part of another device. An example of this would be where **urn:schemas-upnp-org:device:** *RemoteUIClientDevice:1* is implemented inside a device of the type **urn:schemas-upnp-org:device:** *BasicDevice:1*. The *BasicDevice* in this case contains the *DeviceSecurity* service that may be used by another UPnP device e.g., *MediaRenderer*. The implementation of *RemoteUIClientDevice* must contain the minimum version number of the service specified in the table below.

Table 3: Device Requirements for embedded *RemoteUIClientDevice*

DeviceType	Root	Req. or Opt.[1]	ServiceType	Req. or Opt.[1]	Service ID[2]
RemoteUIClientDevice:1	*Yes*	*R*	*RemoteUIClient:1*	*R*	*RemoteUIClient*
			Non-standard services embedded by an UPnP vendor go here.	*X*	*To be defined by vendor*

[1] R = Required, O = Optional, X = Non-standard.
[2] Prefixed by urn:**upnp-org**:**serviceId**: .

Relationships between Services

Figure 2 shows the logical structure of the device and services defined by the working group for UPnP technology enabled Remote UI clients that may use the *DeviceSecurity* service for other UPnP devices contained in the same physical device. *RemoteUIClient* service may be dependent on the *DeviceSecurity* service for providing access control to the actions defined in the services.

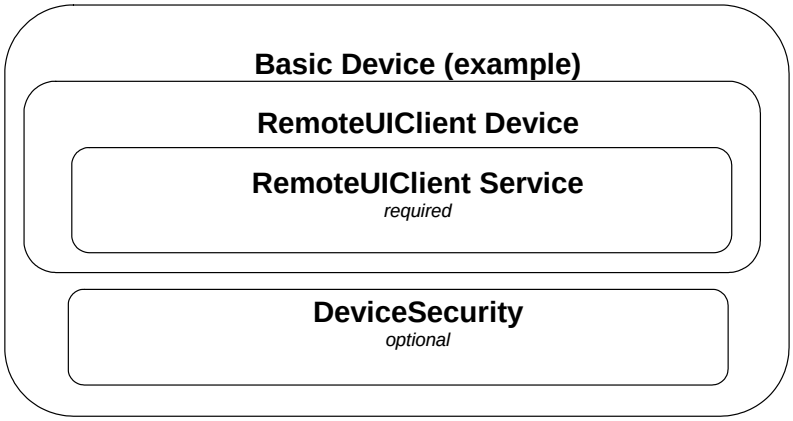

Figure 2: Example of *DeviceSecurity* outside *RemoteUIClientDevice*

2.2.2. Relationships Between Services

The dependencies between the services are listed in the above section under the possible models of implementing services in *RemoteUIClientDevice*.

2.3. Theory of Operation

A Remote UI client can be a fully autonomous device that runs its own user interface in addition to executing remoted UIs, or it may be a fully remoted device with no local UI capability. In both cases, the *RemoteUIClientDevice:1* UPnP device is implemented, allowing anyone on the network to discover and control the Remote UI client. Since many different types of user interaction device exist with many different form factors and usages, the behavior of the Remote UI client device may change.
In any case, it is highly recommended for the Remote UI client to employ the *DeviceSecurity* service to secure specific UPnP Remote UI client actions. This section assumes that the reader has an overall understanding of UPnP Security. Please refer to the *DeviceSecurity*:1 Service Control Specification for detailed description of a secure UPnP device.

2.3.1. Secure Remote UI Clients (if *DeviceSecurity* implemented in Remote UI client device)

RemoteUIClient service provides a set of actions to manage remote connections and process user's input data. The actions in this service that change the device state should be authenticated via UPnP Security. Some actions in *RemoteUIClient* service can carry critical information such as password in their argument field. By using D*ecryptAndExecute* action defined in *DeviceSecurity* service, security sensitive information can be protected . A control point that accesses the secure actions on the service has to be initially authenticated via a Security Console application as described in UPnP Security DCP. Access control definitions such as Permissions, Profiles and Access Control List(ACL) for Remote UI client device are described in Appendix A.

3. XML Device Description

```
<?xml version="1.0" encoding="UTF-8"?>
<root xmlns="urn:schemas-upnp-org:device-1-0">
    <specVersion>
        <major>1</major>
        <minor>0</minor>
    </specVersion>
    <URLBase>base URL for all relative URLs</URLBase>
    <device>
        <deviceType>urn:schemas-upnp-org:device:RemoteUIClientDevice:1
</deviceType>
        <friendlyName>short user-friendly title</friendlyName>
        <manufacturer>manufacturer name</manufacturer>
        <manufacturerURL>URL to manufacturer site</manufacturerURL>
        <modelDescription>long user-friendly title</modelDescription>
        <modelName>model name</modelName>
        <modelNumber>model number</modelNumber>
        <modelURL>URL to model site</modelURL>
        <serialNumber>manufacturer's serial number</serialNumber>
        <UDN>uuid:UUID</UDN>
        <UPC>Universal Product Code</UPC>
        <iconList>
            <icon>
                <mimetype>image/format</mimetype>
                <width>horizontal pixels</width>
                <height>vertical pixels</height>
                <depth>color depth</depth>
                <url>URL to icon</url>
            </icon>
        </iconList>
        <serviceList>
            <service>
                <serviceType>urn:schemas-upnp-org:service:RemoteUIClient:1</serviceType>
                <serviceId>urn:upnp-org:serviceId:RemoteUIClient</serviceId>
                <SCPDURL>URL to service description</SCPDURL>
                <controlURL>URL for control</controlURL>
                <eventSubURL>URL for eventing</eventSubURL>
            </service>
        </serviceList>
        <presentationURL>URL for presentation</presentationURL>
    </device>
</root>
```

4. Test

No semantic tests are defined for this device.

Annex A
(normative)

Access Control Definitions
(if *DeviceSecurity* service is implemented)

This section specifies the Permissions, Profiles and Access Control List (ACL) entry to be implemented in the *DeviceSecurity* service that can optionally be used by the *RemoteUIClientDevice*. This is used by the Security Console to assign access control of secure actions on the Remote UI client device to control point applications. Please refer to the *DeviceSecurity1.0* service specification for more details about Security Console, Permissions, Profiles and ACLs.

A.1 Permissions

The following table describes the permissions to perform access control to the secure actions of the services embedded in the Remote UI client device. The *RUICDeviceAll* is a required permission which can securely access all the actions in the *RemoteUIClient* service. The other permissions are optional. Vendors may define additional set of permissions to perform access control on the Remote UI client device. For example, they may provide separate master and guest permissions for finer granularity of access. However for maximum interoperability, vendors should use the optional permissions presented in this document rather than implementing their own security permissions.

Table 4: Defined permissions for *RemoteUIClient* Service

Permission	Allowed Actions
RUICDeviceAll[1]	*All actions in RemoteUIClient Service.*
RUICDeviceInfo	*GetCurrentConnections, GetDeviceProfile, GetUIListing*
RUICDeviceChangeConnection	*Connect, Disconnect*
RUICDeviceChangeStatus	*AddUIListing, RemoveUIListing, DisplayMessage, ProcessInput*

[1] *RUICDeviceAll* must be implemented.

When implementing only the required *RUICDeviceAll* permission, the following XML format is used:

```
<Permission>
    <UIname>RUICDeviceControl</UIname>
    <ACLEntry>
        <RUIWG:RUICDeviceAll/>
    </ACLEntry>
    <FullDescriptionURL></FullDescriptionURL>
    <ShortDescription>
        This permission allows the control point to set and get all secure actions
        of all the services of the Remote UI client device.
    </ShortDescription>
</Permission>
```

XML element tags UIname, ACLEntry, FullDescription, ShortDescription and Permission are defined in the *DeviceSecurity1*.0 service specification.

The above defined permission is returned by the Remote UI client device in the “DefinedPermissions” argument of *DeviceSecurity*’s GetDefinedPermission action

If the *DeviceSecurity* service resides **inside** the *RemoteUIClientDevice*, it will contain only the defined permissions of the Remote UI client device (as mentioned above). The “DefinedPermissions” argument of GetDefinedPermission action returned by the *DeviceSecurity* in this case would be:

```
<DefinedPermissions>
        <Permission>
                <UIname>RUICDeviceControl</UIname>
                <ACLEntry>
                        <RUIWG:RUICDeviceAll/>
                </ACLEntry>
                <FullDescriptionURL></FullDescriptionURL>
                <ShortDescription>
                        Allow this application to complete control of the Remote UI client device.
                </ShortDescription>
        </Permission>
</DefinedPermissions>
```

If the *DeviceSecurity* service resides **outside** of the *RemoteUIClientDevice* and the *RemoteUIClientDevice* is embedded in a container device with other devices such as MediaRenderer, the “DefinedPermissions” argument of GetDefinedPermission action returned by the *DeviceSecurity* service in this case would be:

```
<DefinedPermissions>
        <Permission>
                <UIname>RUICDeviceControl</UIname>
                <ACLEntry>
                        <RUIWG:RUICDeviceAll/>
                </ACLEntry>
                <FullDescriptionURL></FullDescriptionURL>
                <ShortDescription>
                        Allow this application to complete control of the Remote UI client device.
                </ShortDescription>
        </Permission>
        <Permission>
                e.g., Permission defined by MediaRenderer Device
        </Permission>
…
</DefinedPermissions>
```

A.2 Profiles

There is no profile specified to be used for the Remote UI client device. However, vendors may define profiles of their own. Please refer to *DeviceSecurity*1.0 service specification for more details.

A.3 Access Control List (ACL) entry

If DeviceSecurity service is implemented in the UPnP Remote UI client device, *RemoteUIClient* would have the "<RUIWG:RUICDeviceAll>" defined permission for access control. Following XML shows an example ACL entry granting this defined permission to the control point specified in the subject element**.** The string value "dRDPBgZz…" under the <hash> tag denotes the public key hash of the control point for which this ACL is defined as an example.

```
<acl>
        <entry>
                <subject>
                        <hash>
                                <algorithm>SHA1</algorithm>
                                <value>dRDPBgZzTFq7Jl2Q2N/YNghcfj8=</value>
                        </hash>
                </subject>
                <access>
                        <RUIWG:RUICDeviceAll/>
                </access>
                <valid>
                        <not-before>2002-10-23_05:17:32</not-before>
                        <not-after>2004-12-31_23:59:59</not-after>
                </valid>
        </entry>
</acl>
```
