Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see http://www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of the ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword – Supplementary information

ISO/IEC 29341-12-2 was prepared by UPnP Implementers Corporation and adopted, under the PAS procedure, by joint technical committee ISO/IEC JTC 1. Information technology, in parallel with its approval by national bodies of ISO and IEC.

This second edition replaces the first edition (ISO/IEC 29341-12-2:2008), which has been technically revised.

The list of all currently available parts of ISO/IEC 29341 series, under the general title *Information technology — UPnP Device Architecture*, can be found on the ISO web site.

Introduction

ISO and IEC draw attention to the fact that it is claimed that compliance with this document may involve the use of patents as indicated below.

ISO and IEC take no position concerning the evidence, validity and scope of these patent rights. The holders of these patent rights have assured ISO and IEC that they are willing to negotiate licenses under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of the holders of these patent rights are registered with ISO and IEC.

Intel Corporation has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Intel Corporation Standards Licensing Department 5200 NE Elam Young Parkway MS: JFS-98 USA – Hillsboro, Oregon 97124

Microsoft Corporation has informed ISO and IEC that it has patent applications or granted patents as listed below:

6101499 / US; 6687755 / US; 6910068 / US; 7130895 / US; 6725281 / US; 7089307 / US; 7069312 / US; 10/783524 /US

Information may be obtained from:

Microsoft Corporation One Microsoft Way USA – Redmond WA 98052

Philips International B.V. has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Philips International B.V. – IP&S High Tech campus, building 44 3A21 NL – 5656 Eindhoven

NXP B.V. (NL) has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

NXP B.V. (NL) High Tech campus 60 NL – 5656 AG Eindhoven

Matsushita Electric Industrial Co. Ltd. has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Matsushita Electric Industrial Co. Ltd. 1-3-7 Shiromi, Chuoh-ku JP – Osaka 540-6139

Hewlett Packard Company has informed ISO and IEC that it has patent applications or granted patents as listed below:

5 956 487 / US; 6 170 007 / US; 6 139 177 / US; 6 529 936 / US; 6 470 339 / US; 6 571 388 / US; 6 205 466 / US

Information may be obtained from:

Hewlett Packard Company 1501 Page Mill Road USA – Palo Alto, CA 94304

Samsung Electronics Co. Ltd. has informed ISO and IEC that it has patent applications or granted patents.

Information may be obtained from:

Digital Media Business, Samsung Electronics Co. Ltd. 416 Maetan-3 Dong, Yeongtang-Gu, KR – Suwon City 443-742

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Original UPnP Documents

Reference may be made in this document to original UPnP documents. These references are retained in order to maintain consistency between the specifications as published by ISO/IEC and by UPnP Implementers Corporation. The following table indicates the original UPnP document titles and the corresponding part of ISO/IEC 29341:

INFORMATION TECHNOLOGY – UPNP DEVICE ARCHITECTURE –

Part 12-2: Remote User Interface Device Control Protocol – Remote User Interface Server Device

1. Scope

This device template is compliant with the UPnP Architecture, Version 1.0.

This document defines the device urn:schemas-upnp-org:device:RemoteUIServerDevice:1.

This device can be a UPnP root device, or embedded within a different device.

The RemoteUIServerDevice encapsulates all services for the Remote UI Server Device Control Protocol (DCP).

2. Device Definitions

2.1. Device Type

The following device type identifies a device that is compliant with this template:

urn:schemas-upnp-org:device:RemoteUIServerDevice:1

2.2. Device Model

It is recommended that *RemoteUIServerDevice* be implemented with support for securing UPnPTM actions. It is also recommended that securing of UPnPTM action is done using the *DeviceSecurity* service as defined by the UPnPTM security working committee. If implemented, the *DeviceSecurity* service must be contained either inside *RemoteUIServerDevice* implementation or in a device that encompasses the *RemoteUIServerDevice*. These two models are described below.

2.2.1. Description of Device Requirements

The following table briefly describes the service used in *RemoteUIServerDevice*.

Table 1: RemoteUIServerDevice Service Descriptions

Service Name	Service Description
RemoteUIServer	Allows for basic discovery of available and remotable user interfaces.
DeviceSecurity	Actions for taking ownership, configuring access control, establishing secure sessions, and invoking secure actions.

2.2.1.1. DeviceSecurity within RemoteUIServerDevice

This model is typically applicable to physical devices that need *DeviceSecurity* functionality (including device ownership and access control) to be used only by the *RemoteUIServerDevice*. In this case, products that expose devices of the type **urn:schemas-upnp-org:device:***RemoteUIServerDevice:1* must implement minimum version numbers of the required service specified in the table below.

Table 2: Device Requirements for stand-alone RemoteUIServerDevice

DeviceType	Root	Req. or Opt. ¹	ServiceType	Req. or Opt. ¹	Service ID ²
<u>RemoteUIServerDevice:1</u>	<u>Yes</u>	<u>R</u>	<u>RemoteUIServer:1</u>	<u>R</u>	<u>RemoteUIServer</u>
			<u>DeviceSecuirty:1</u>	<u>O</u>	<u>DeviceSecurity</u>
			Non-standard services embedded by an UPnP vendor go here.	X	To be defined by vendor

 $[\]overline{}$ R = Required, O = Optional, X = Non-standard.

Relationship between Services

² Prefixed by <u>urn:upnp-org:serviceId</u>:

Figure 1 shows the logical structure of the device and services defined by the working group for UPnPTM technology enabled Remote UI servers.

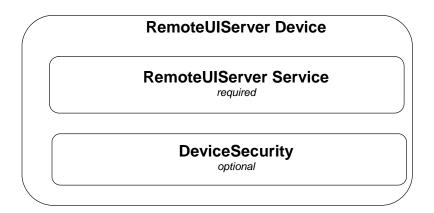

Figure 1: DeviceSecurity within RemoteUIServerDevice

2.2.1.2. DeviceSecurity outside RemoteUIServerDevice

This model is typically applicable to physical devices that implement Remote UI server functionality, but the *RemoteUIServerDevice* may use *DeviceSecurity* that is already part of another device. An example of this would be where **urn:schemas-upnp-org:device**: *RemoteUIServerDevice*: *I* is implemented inside a device of the type **urn:schemas-upnp-org:device**: *BasicDevice*: *1*. The *BasicDevice* in this case contains the *DeviceSecurity* service that may be used by another UPnPTM device e.g., *MediaRenderer*. The implementation of *RemoteUIServerDevice* must contain the minimum version number of the service specified in the table below.

Table 3: Device Requirements for embedded RemoteUIServerDevice

DeviceType	Root	Req. or Opt. ¹	ServiceType	Req. or Opt. ¹	Service ID ²
<u>RemoteUIServerDevice:1</u>	<u>Yes</u>	<u>R</u>	<u>RemoteUIServer:1</u>	<u>R</u>	<u>RemoteUIServer</u>
			Non-standard services embedded by an UPnP vendor go here.	X	To be defined by vendor

 $^{^{1}}$ R = Required, O = Optional, X = Non-standard.

Relationships between Services

Figure 2 shows the logical structure of the device and services defined by the working group for UPnPTM technology enabled Remote UI servers that may use the *DeviceSecurity* service for other UPnPTM devices contained in the same physical device. *RemoteUIServer* service may be dependent on the *DeviceSecurity* service for providing access control to the actions defined in the services.

² Prefixed by urn:upnp-org:serviceId: .

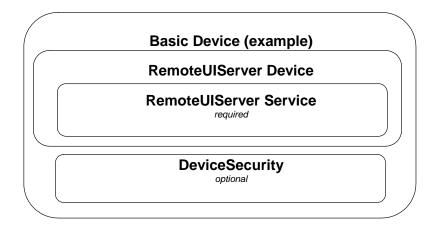

Figure 2: Example of DeviceSecurity outside RemoteUIServerDevice

2.2.2. Relationships Between Services

The dependencies between the services are listed in the above section under the possible models of implementing services in *RemoteUIServerDevice*.

2.3. Theory of Operation

It is highly recommended for the Remote UI server to use *DeviceSecurity* service to secure specific UPnPTM Remote UI server actions. This section assumes that the reader has an overall understanding of UPnPTM Security. Please refer to the *DeviceSecurity*:1 Service Control Specification for detailed description of a secure UPnPTM device.

2.3.1. Secure Remote UI Servers (if DeviceSecurity implemented in Remote UI server device)

RemoteUIServer service provides a set of actions to give a list of user interfaces and to destroy an unconnected, instantiated UI. The actions in this service that change the device state should be authenticated via UPnPTM security. Some actions in RemoteUIServer service can carry critical information such password as arguments. By using DecryptAndExecute action defined in DeviceSecurity service, security sensitive information can be protected. A control point that accesses the secure actions on the service has to be initially authenticated via a Security Console application as described in UPnPTM Security DCP. Access control definitions such as Permissions, Profiles and Access Control List(ACL) for Remote UI server device are described in Appendix A.

3. XML Device Description

```
<?xml version="1.0" encoding="UTF-8"?>
<root xmlns="urn:schemas-upnp-org:device-1-0">
  <specVersion>
     <major>1</major>
     <minor>0</minor>
  </specVersion>
  <URLBase>base URL for all relative URLs
  <device>
     <deviceType>urn:schemas-upnp-org:device:RemoteUIServerDevice:1
</deviceType>

     <UPC>Universal Product Code
     <iconList>
        <icon>
           <mimetype>image/format</mimetype>
           <width>horizontal pixels</width>
           <height>vertical pixels</height>
           <depth>color depth</depth>
           <url>URL to icon</url>
        </icon>
      </iconList>
      <serviceList>
        <service>
           <serviceType>urn:schemas-upnp-org:service:RemoteUIServer:1</serviceType>
           <serviceId>urn:upnp-org:serviceId:RemoteUIServer</serviceId>
           <SCPDURL>URL to service description</SCPDURL>
           <controlURL>URL for control
           <eventSubURL>URL for eventing/eventSubURL>
        </service>
     </serviceList>
      or presentationURL>URL for presentation
   </device>
</root>
```

4. Test

No semantic tests are defined for this device.

Annex A (normative)

Access Control Definitions (if *DeviceSecurity* service is implemented)

This section specifies the Permissions, Profiles and Access Control List (ACL) entry to be implemented in the *DeviceSecurity* service that can optionally be used by the *RemoteUIServerDevice*. This is used by the Security Console to assign access control of secure actions on the Remote UI server device to control point applications. Please refer to the *DeviceSecurity1.0* service specification for more details about Security Console, Permissions, Profiles and ACLs.

A.1 Permissions

The following table describes the permissions to perform access control on the secure actions of the services embedded in the Remote UI server device. The *RUISDeviceAll* is a required permission which can securely access all actions in the *RemoteUIServer* service. The other permissions are optional. Vendors may define additional set of permissions to perform access control on the Remote UI client device. For example, they may provide separate master and guest permissions for the finer granularity of access. However, for better interoperability, vendors should use the optional permissions presented in this document than implementing their own security permissions.

Table 4: Defined permissions for RemoteUIServer Service

Permission	Allowed Actions		
RUISDeviceAll ¹ All actions in RemoteUIServer Service.			
RUISDeviceInfo	GetCompatibleUIs		
RUISDeviceChangeStatus	SetUILifetime		

¹ *RUISDeviceAll* must be implemented.

When implementing only one the required RUISDeviceAll permission, the following XML format is used:

XML element tags UIname, ACLEntry, FullDescription, ShortDescription and Permission are defined in *DeviceSecurity1*.0 service specification.

The above defined permission is returned by the Remote UI server device in the "DefinedPermissions" argument of *DeviceSecurity*'s GetDefinedPermission action.

If the *DeviceSecurity* service resides **inside** the *RemoteUIServerDevice*, it will contain only the defined permissions of the Remote UI server device (as mentioned above). The "DefinedPermissions" argument of GetDefinedPermission action returned by the *DeviceSecurity* in this case would be:

If the *DeviceSecurity* service resides **outside** of the *RemoteUIServerDevice* and the *RemoteUIServerDevice* is embedded in a container device with other devices such as *MediaRenderer*, the "DefinedPermissions" argument of GetDefinedPermission action returned by the *DeviceSecurity* service in this case would be:

A.2 Profiles

There is no profile specified to be used for the Remote UI server device. However, vendors may define profiles of their own. Please refer to *DeviceSecurity*1.0 service specification for more details.

A.3 Access Control List (ACL) entry

If DeviceSecurity service is implemented in the UPnPTM Remote UI server device, *RemoteUIServer* would have the "<RUIWG:RUISDeviceAll>" defined permission for access control. Following XML shows an example ACL entry granting this defined permission to the control point specified in the subject element. The string value "dRDPBgZz…" under the <hash> tag denotes the public key hash of the control point for which this ACL is defined as an example.

```
<acl>
        <entry>
                <subject>
                        <hash>
                                <algorithm>SHA1</algorithm>
                                <value>dRDPBgZzTFq7Jl2Q2N/YNghcfj8=</value>
                        </hash>
                </subject>
                <access>
                        <RUIWG:RUISDeviceAll/>
                </access>
                <valid>
                        <not-before>2002-10-23_05:17:32</not-before>
                        <not-after>2004-12-31_23:59:59</not-after>
                </valid>
        </entry>
</acl>
```
